

CLEANATLANTIC CONFERENCE

Vigo, 21st June

09.00 – 16.30 h
(UTC+2h00, Madrid, Bruselas)

Advances on Marine Litter Data Management and Monitoring Tools

Morgan Le Moigne (Ifremer),
Agueda Cabrero, Pablo Otero (IEO)
Joao Monteiro, Paola Paretti (ARDITI, MARE)
Pedro Sepulveda (DROTA)
Sandra Moutinho (DGRM)
Josie Russel (Cefas)
Garbiñe Ayensa Aguirre (Intecmar)
Olivia Gerigny, Elise Georges (Ifremer)

agência regional para o
desenvolvimento da investigação
tecnologia e inovação

Objective

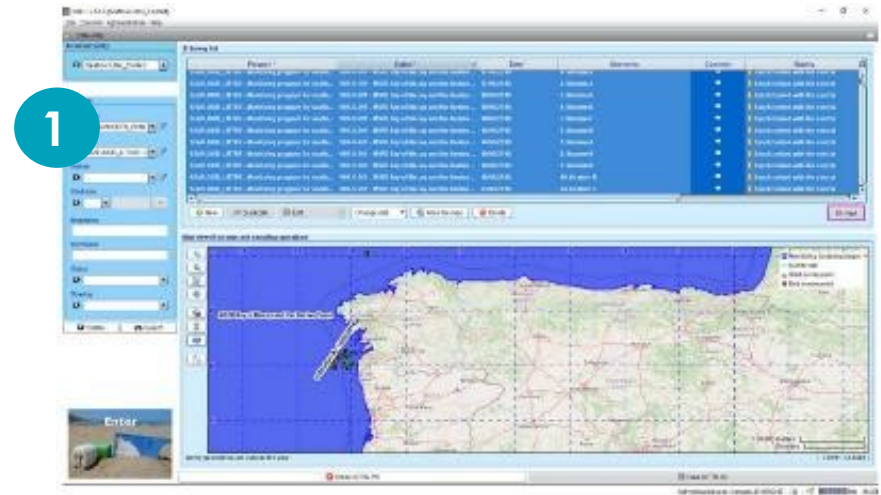

Reinforce harmonized monitoring of marine litter in the framework of the MSFD

Results – phase 1- Data Management

1. Database and software: Development of sustainable tools for Marine Litter Data management. IFREMER
2. App: App to record data for seafloor litter. CEFAS
3. App: Marine Litter LOC-app. INTECMAR
4. App: Floating Litter Reporter. ARDITI

Results – phase 1- Monitoring interactions

Reports/scientific papers:

Ingestion:

1. Towards a protocol for the observation of microplastics in biota. CEFAS
2. You Are What You Eat, Microplastics in Porbeagle Sharks From the North East Atlantic: Method Development. CEFAS
3. Ingestion of plastic debris (macro and micro) by longnose lancetfish (*Alepisaurus ferox*) in the North Atlantic Ocean. IEO
4. Microplastic ingestion by pelagic and benthic fish and diet composition: A case study in the NW Iberian shelf. IEO
5. Microplastic occurrence in deep-sea fish species *Alepocephalus bairdii* and *Coryphaenoides rupestris* from the Porcupine Bank (North Atlantic). (Submitted to STOTEN) IEO

Entanglement:

6. Strategy and constraints to support monitoring of Marine Litter Harm: Towards a protocol for the observation of marine organisms entangled/strangled/covered by marine litter during ROV operations. IFREMER

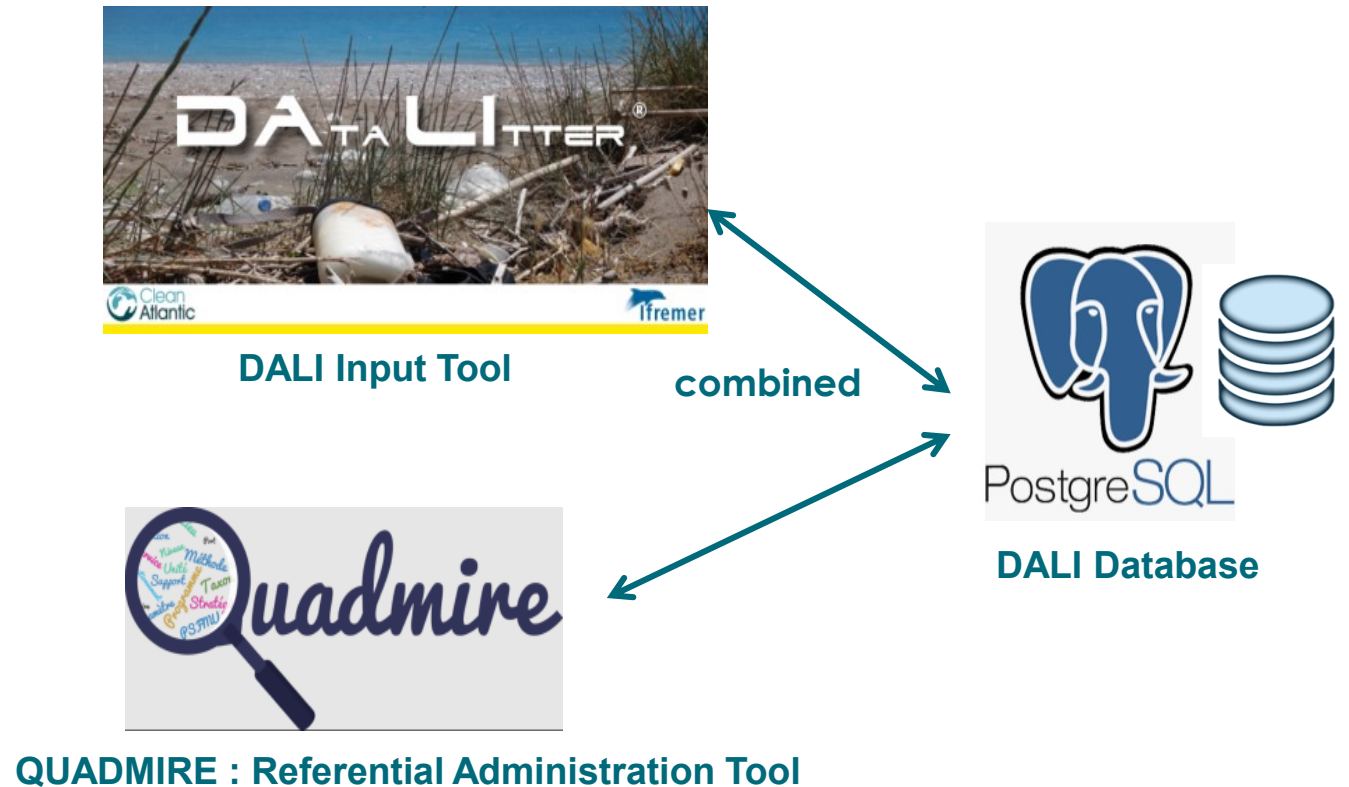

Software & Database

DALI use

- DB deployed
- Data entries
- Referential creation in QUADMIRE (i.e. EMODNET references of size, color and type)

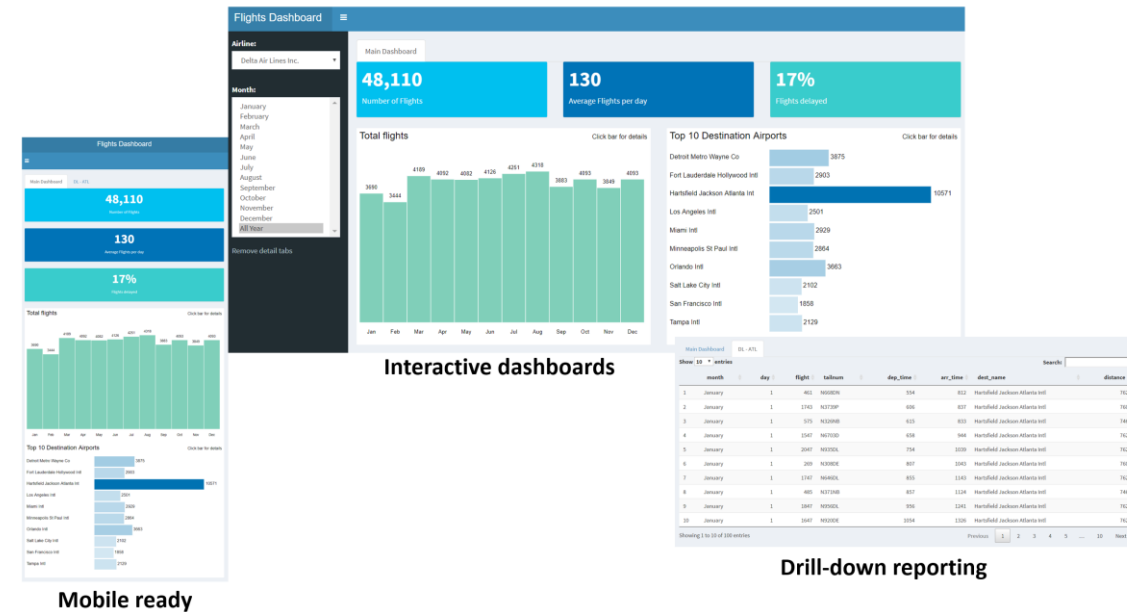

DAI products

R scripts to provide automatic “first & ready” data analysis for reporting

✓ Graphs

✓ Maps : density (nb items/km2), categories

✓ Pdf to download

Apps development

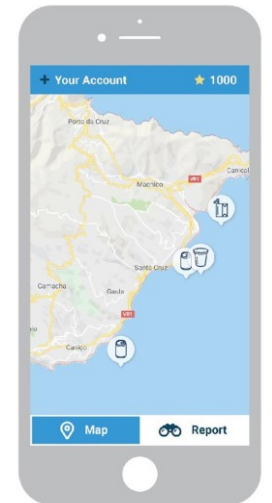

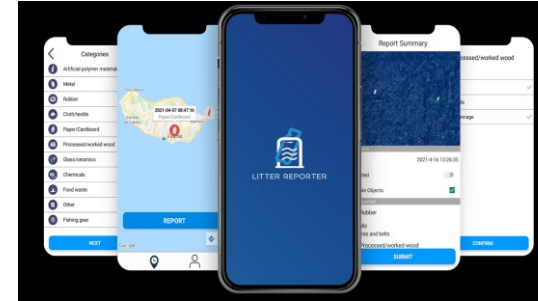

Tools for marine litter monitoring

Stakeholder engagement

Marine Litter Reporter APP

Leveraging mobile apps to crowdsource litter data

Monitoring the presence of marine litter

New tools

Studies to assess and improve monitoring

UAS/Drone for monitoring accumulation areas to complement the beach monitoring

DRAAC is responsible for the beach litter monitoring scheme, complementing it with clean-ups in remote accumulation sites, with analysis of quantities and probable activity origin

- 10 monitoring sites
- Since 2020
- OSPAR guidelines

- Remote accumulation sites
- 26 clean-up events
- 3.6Ton removed (since 2021)
- 57% Sea related
- Mostly originated far away

Remote accumulation sites

UAS/Drone for monitoring accumulation areas to complement the beach monitoring

Secretaria Regional
de Ambiente, Recursos Naturais
e Alterações Climáticas
Direção Regional do Ambiente
e Alterações Climáticas

MARE-Madeira coordinated flight prior to DRAAC sampling to estimate ML pollution and assess correlations with *in situ* data.

UAS/Drone for monitoring accumulation areas to complement the beach monitoring

Secretaria Regional
de Ambiente, Recursos Naturais
e Alterações Climáticas
Direção Regional do Ambiente
e Alterações Climáticas

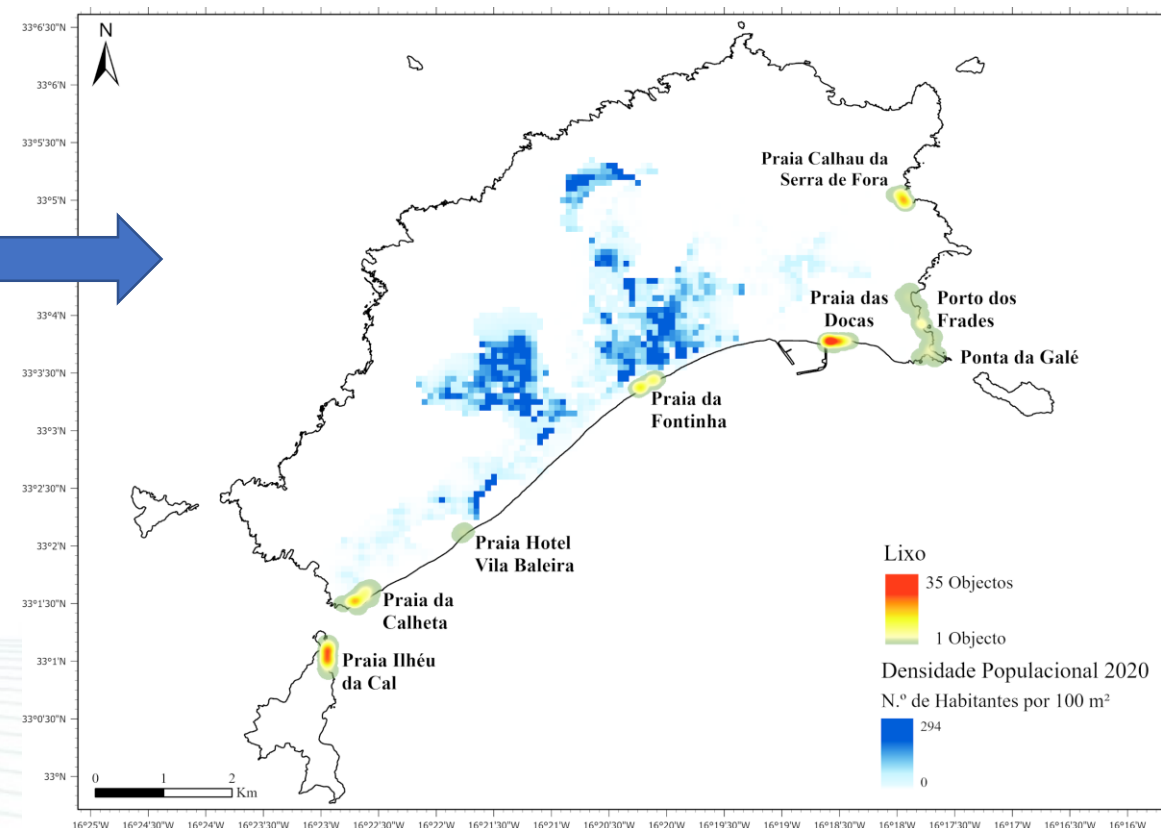

Cliffs and other locations can be surveyed using UAS and structure from motion photogrammetry to generate 3d models for analysis.

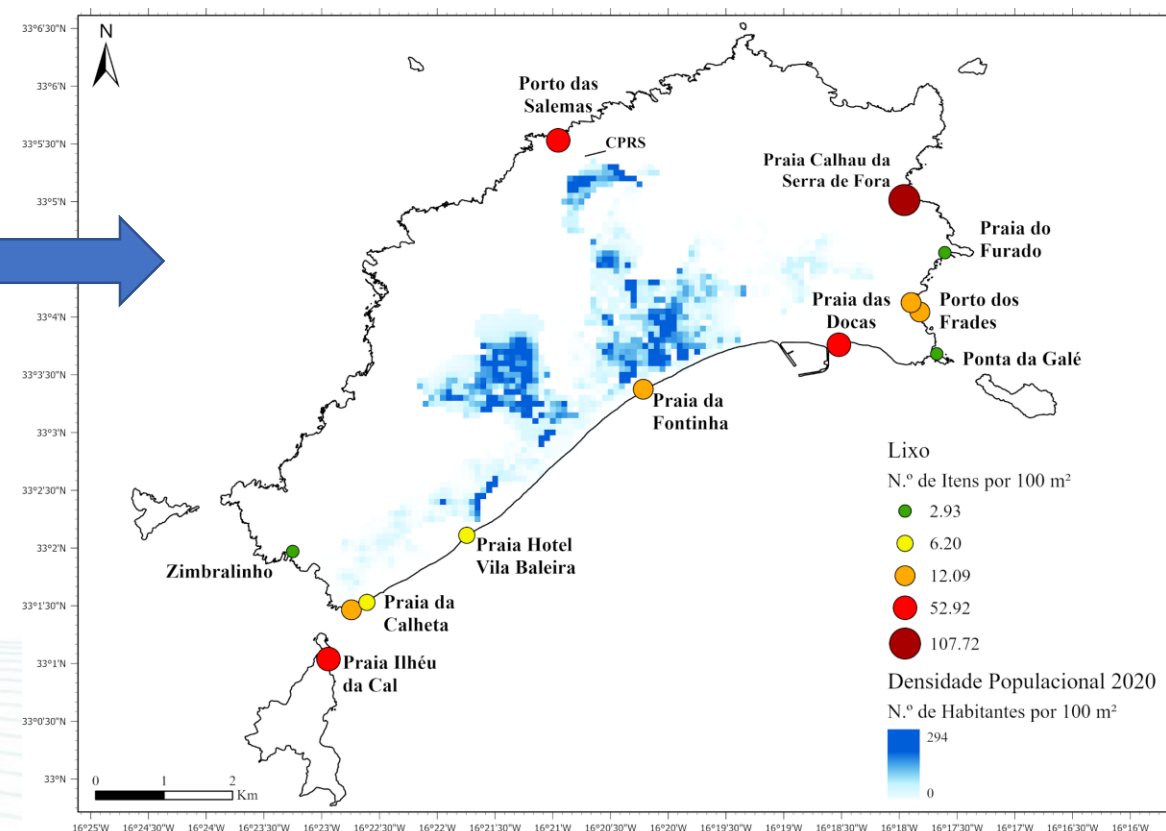

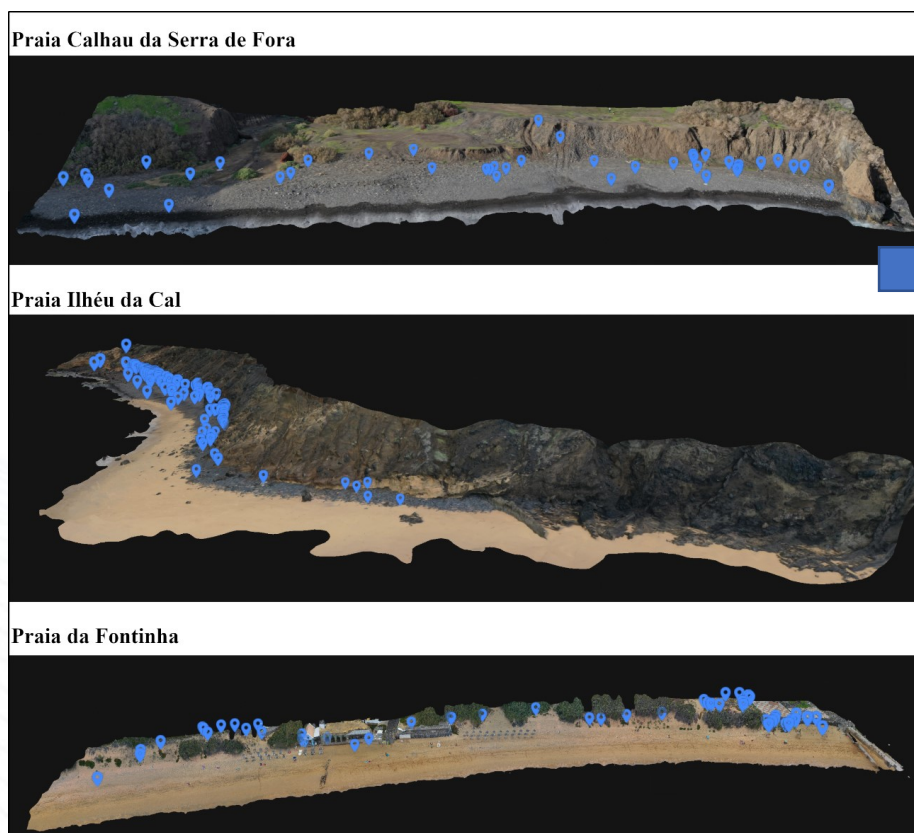

UAS/Drone for monitoring accumulation areas to complement the beach monitoring

Litter items detection allows to determine litter density and identify accumulation areas

UAS/Drone for monitoring accumulation areas to complement the beach monitoring

Litter items detection allows to determine litter density and identify accumulation areas

PACMAN 2021

KOPP Dorothée, MEHAULT Sonia (2021) PACMAN cruise, RV
Côtes De La Manche, <https://doi.org/10.17600/18001472>

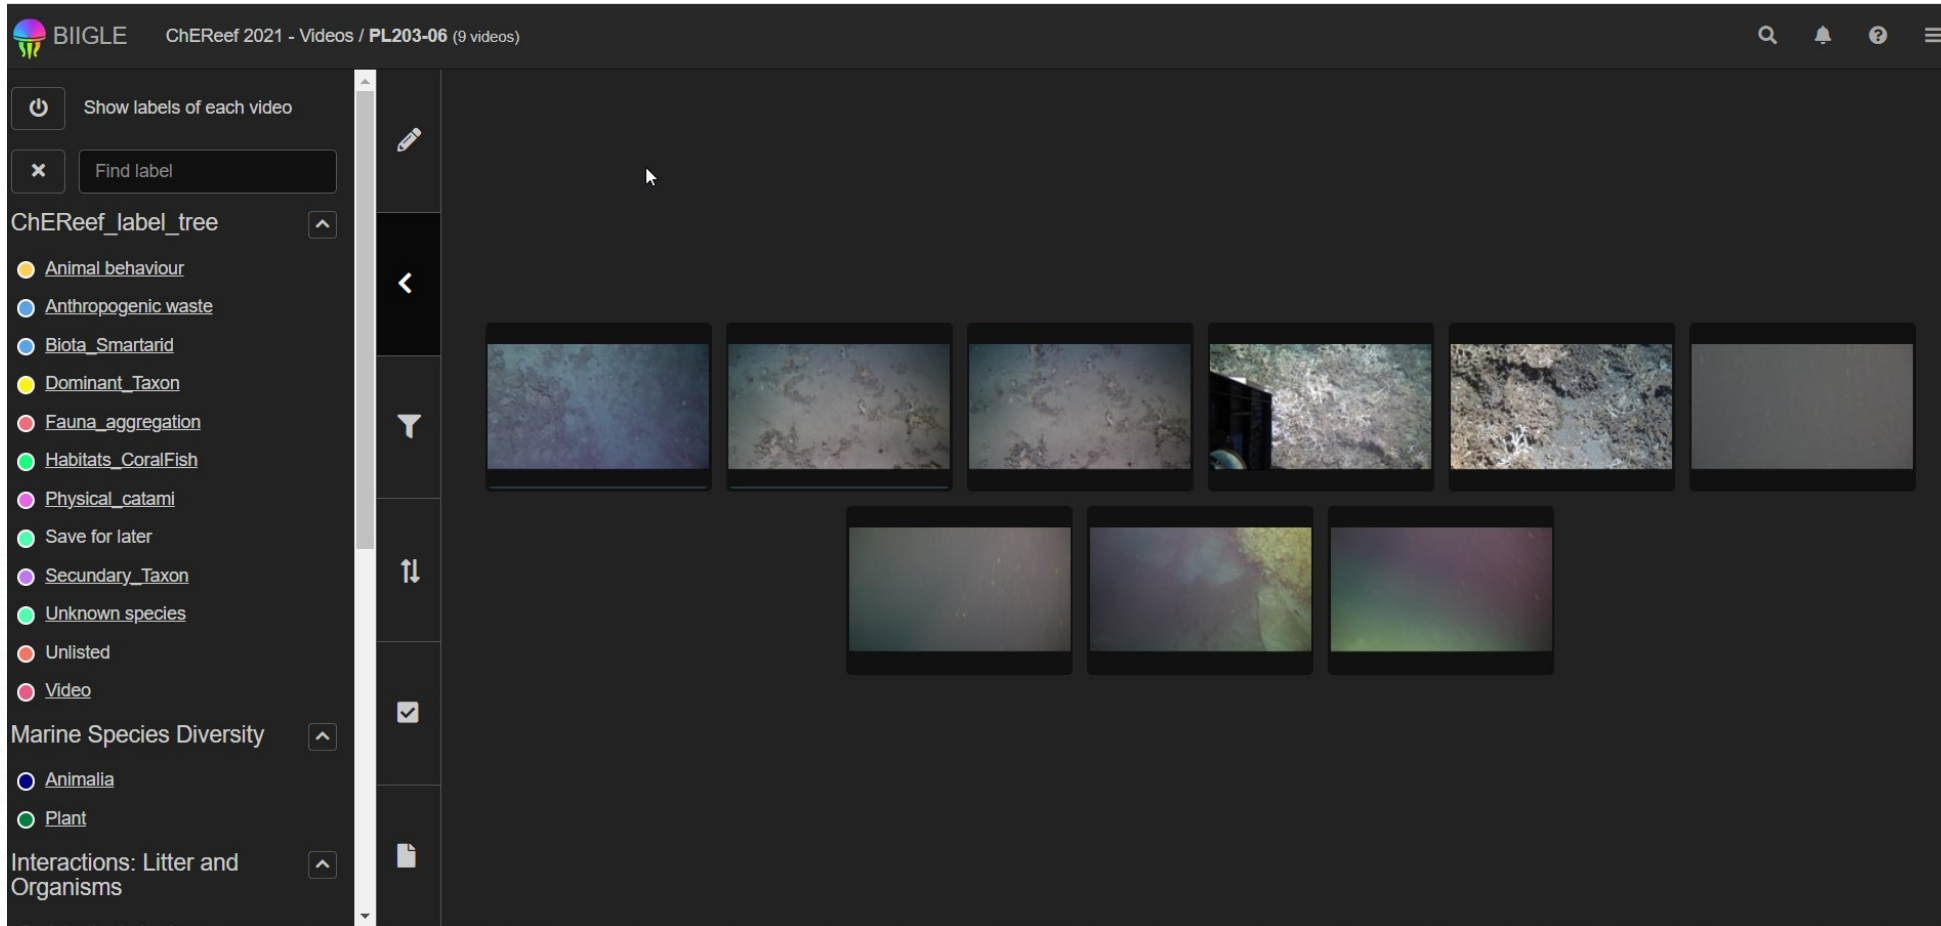

CheReef 2021 – Dive 203-6

MENOT Lenaick, TOUROLLE Julie (2021) ChEReef 2021 cruise, RV
Thalassa, <https://doi.org/10.17600/18001448>

BIIGLE videos annotation tool

Free online software for annotation of still images and videos developed by the Center for Biotechnology (CeBiTec) and Bielefeld University (Germany) (LangenkämperD, et al, 2017)

Allows to share vidoes, images and common label trees at international level

FR Results

PACMAN 2021

■ Undetermined ■ Rope ■ Glass ■ Metal ■ Fishing line
■ Fishing net ■ Plastic ■ Cloth ■ Building litter ■ Medical litter

Percentage of Seafloor litter counted in Pacman Dives

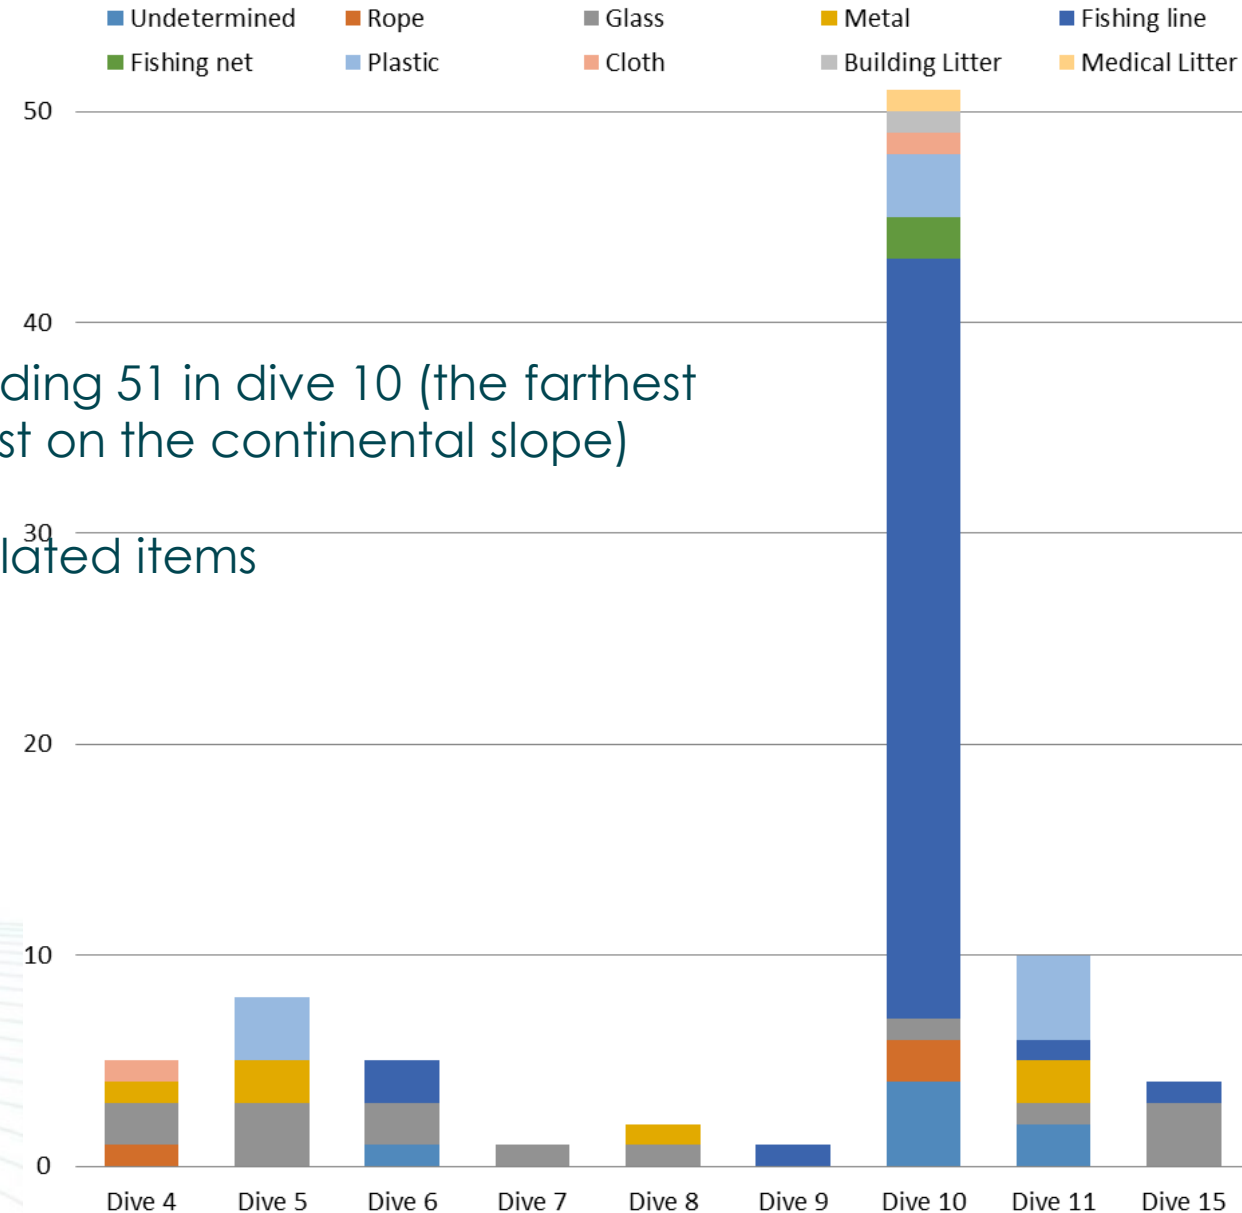

87 litters including 51 in dive 10 (the farthest from the coast on the continental slope)

47% fishing related items

16% Glass

12% Plastic

1 interaction

FR Results

PACMAN 2021

Plastic bag,
depth 305m

Fishing net,
depth 428m

Fishing line,
depth 118m

Plastic cup,
depth 121m

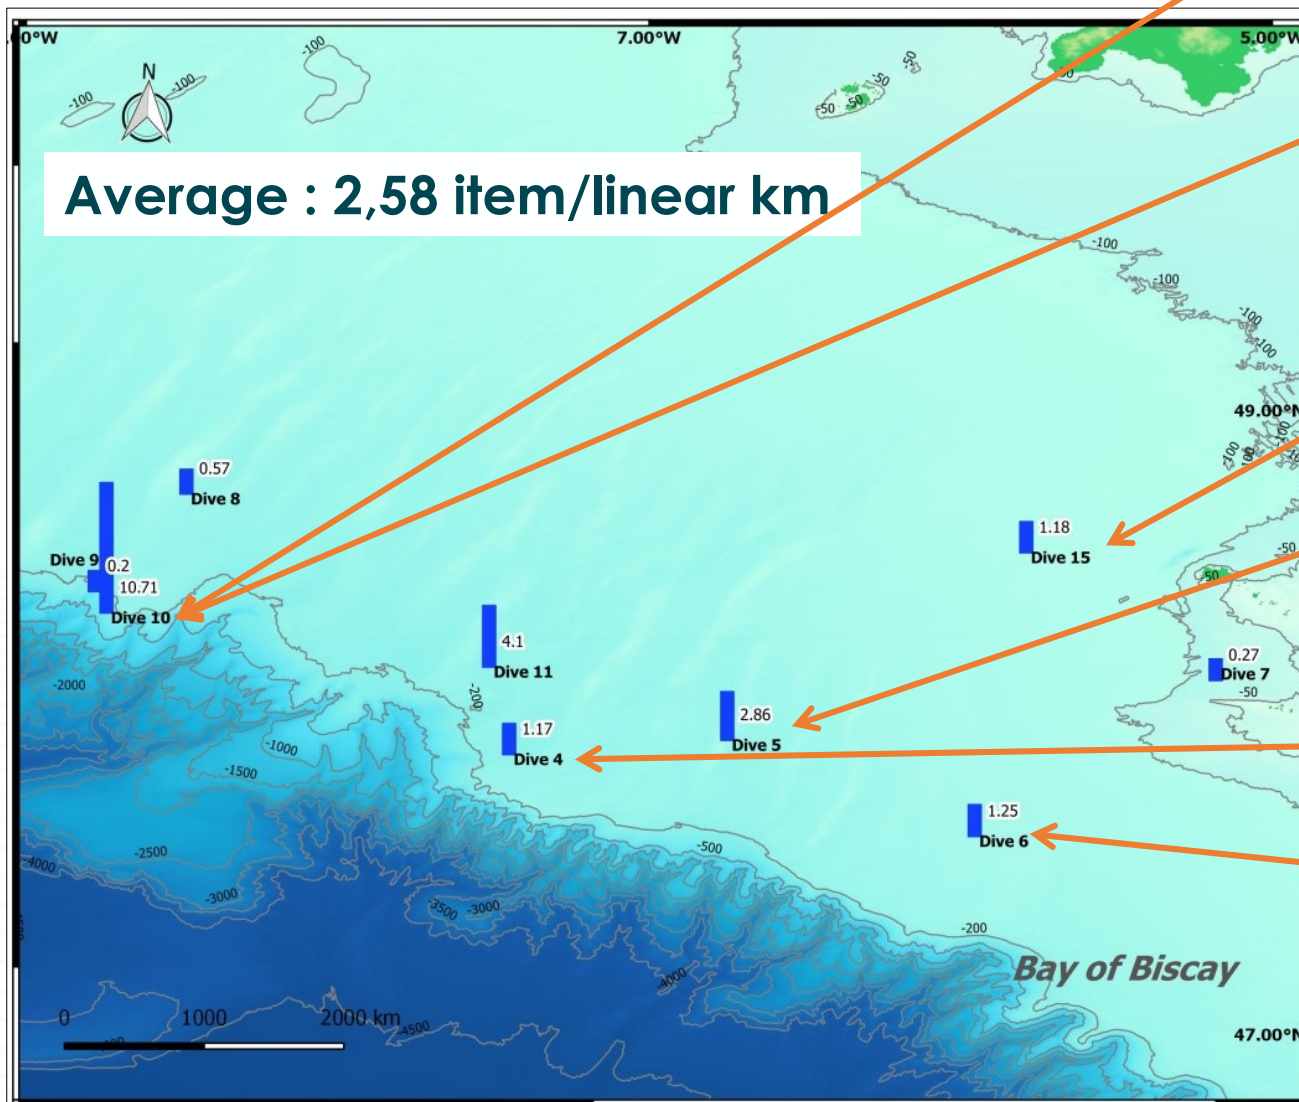

Piece of cloth,
depth 176m

Bottle colonized
by crinoids,
depth 141m

Average : 2,58 item/linear km

PACMAN Campaign Bay of Biscay / Celtic sea

Number items / Km

6

Data origin :
Dorothee Kopp, Sonia Méhaut (2021)
Pacman 2021 cruise, RV Côtes De La
Manche,
<https://doi.org/10.17600/18001448>

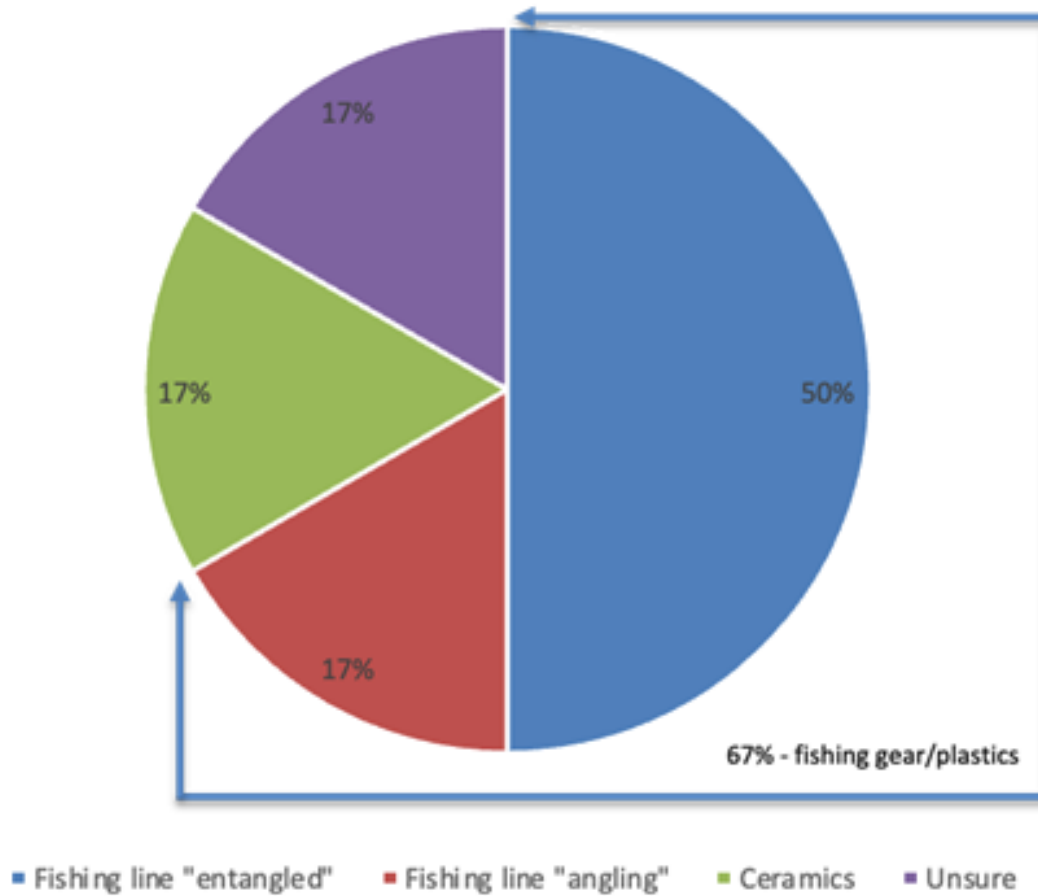

Map base :
Gebco 2021

Coordinates system :
WGS84/Pseudo Mercator

Creation date : 05/2023

FR Results

CheReef 2021 = 1 dive(203) to compare potential bias between observers

1 dive analyzed

6 marine litters

67% fishing related items

16 % ceramics

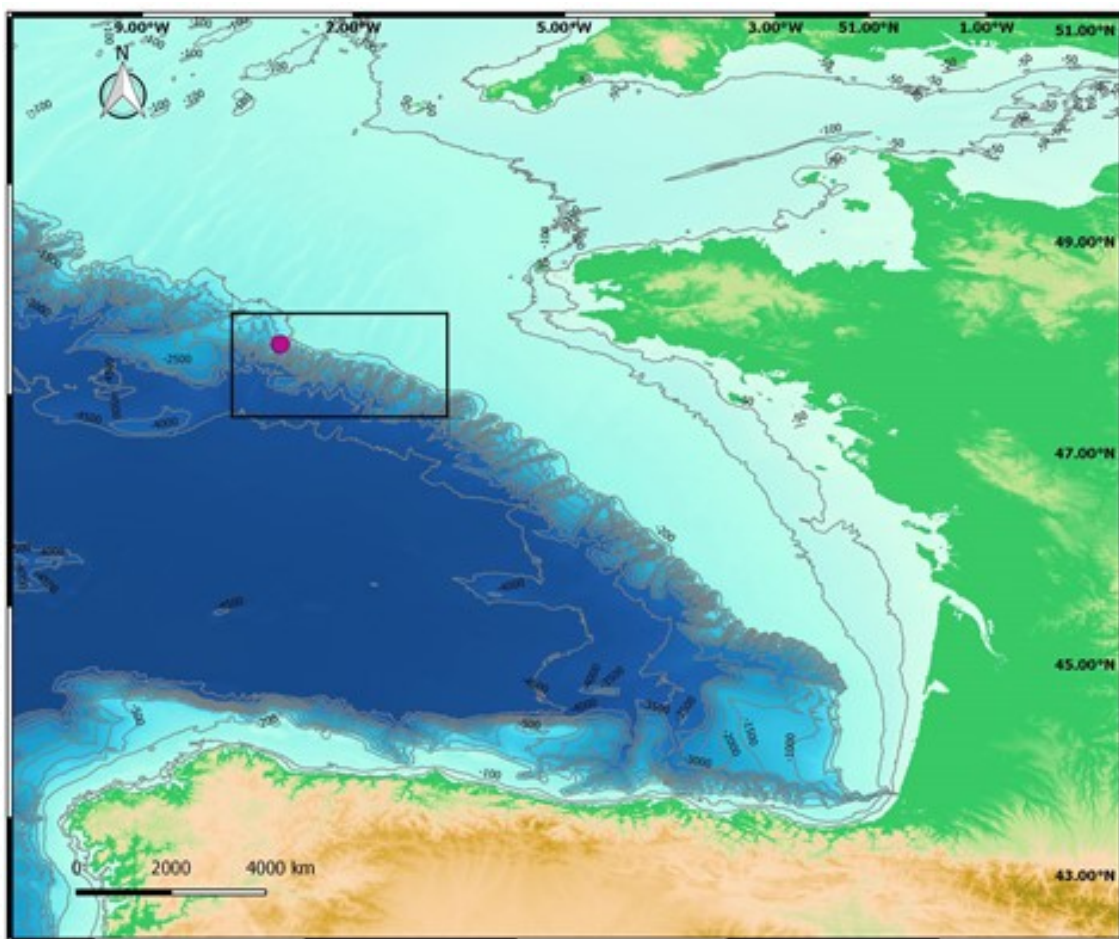

16% « unsure »

3 interactions with cnidarians

FR Results

CheReef 2021

1,71 item/linear km – Depth range 820-885 m

Lampaul submarine canyon
Bay of Biscay / Celtic sea

Dive 203-6
12/08/2021

WGS84/Pseudo Mercator

Creation date : 05/2023

Images from BIGLE annotation tool – a,c,d :
fishing line entangled in cnidarians (with
interactions) ; b : unsure category ; e : fishing line
« angling » ; f : plate (ceramics category)

0.86 interaction/linear kilometer

Assessing seafloor litter from ROV & UW video

Technology in seafloor litter monitoring:

Technological solutions:

- Submarines
- ROVs and AUVs
- Video and images
- Side-scanner
- UW Photogrammetry
- AI and Deep Learning

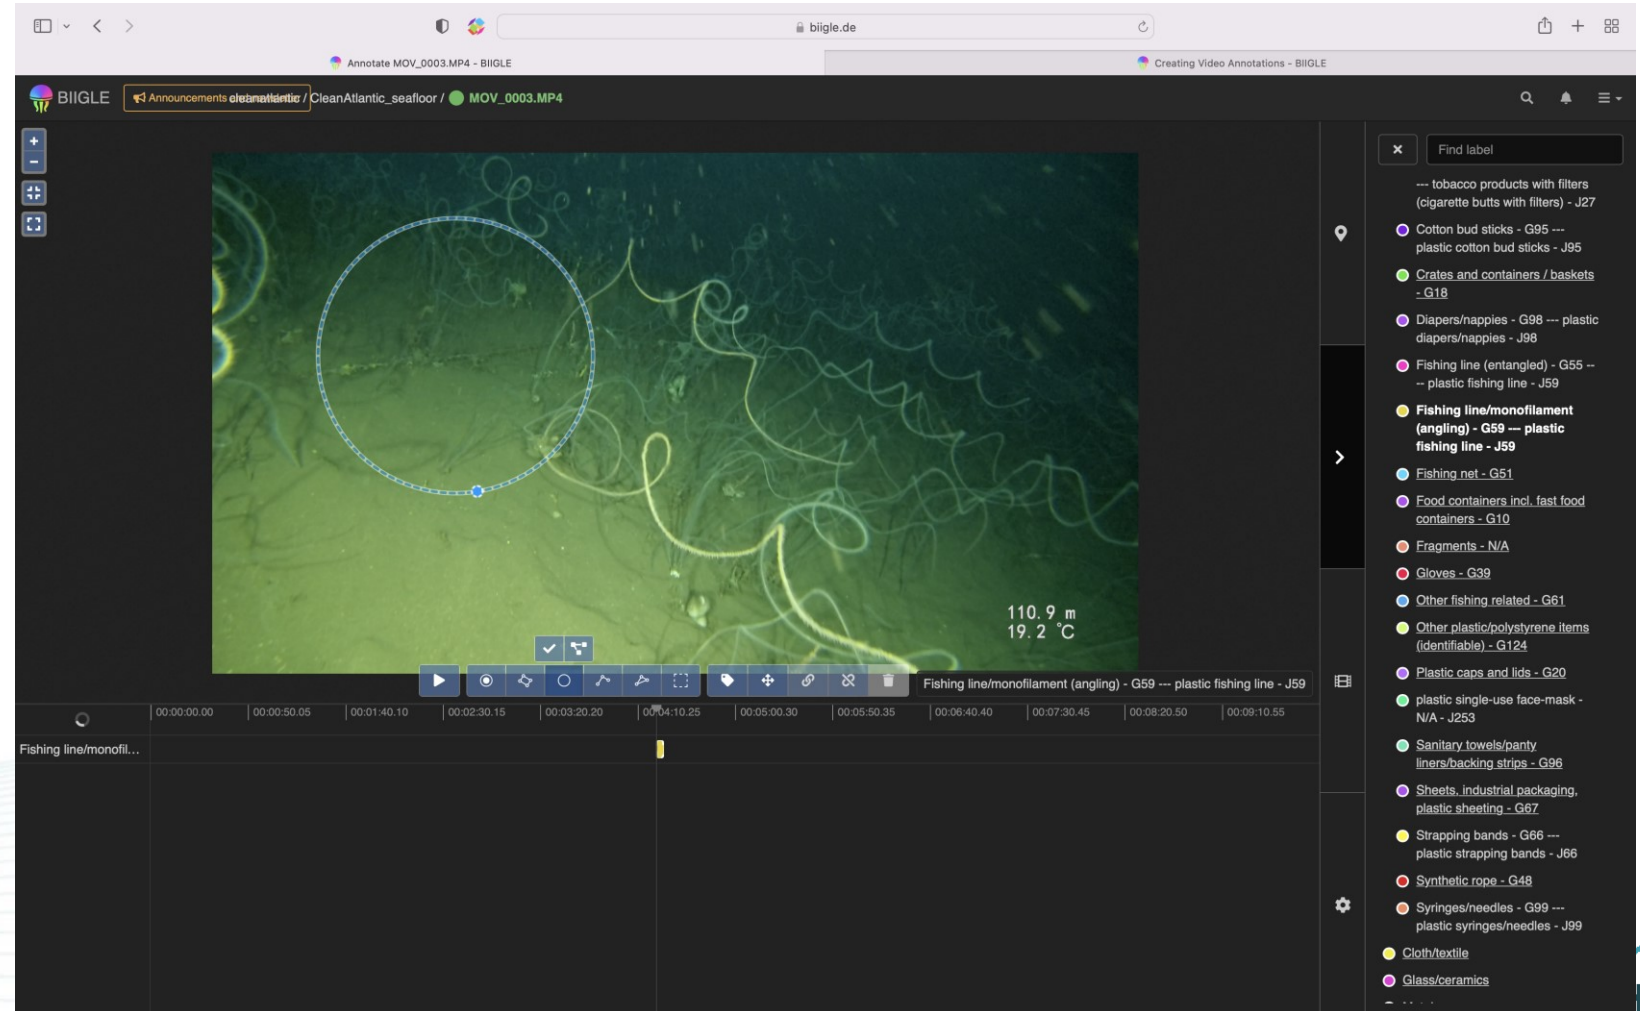

Assessing seafloor litter from ROV & UW video

Technology in seafloor litter monitoring:

Technological solutions:

- Image annotation interfaces (BIIGLE, ...)
- Collaborative
- Hierarchical structure
- Remote Access
- Size and speed limitations

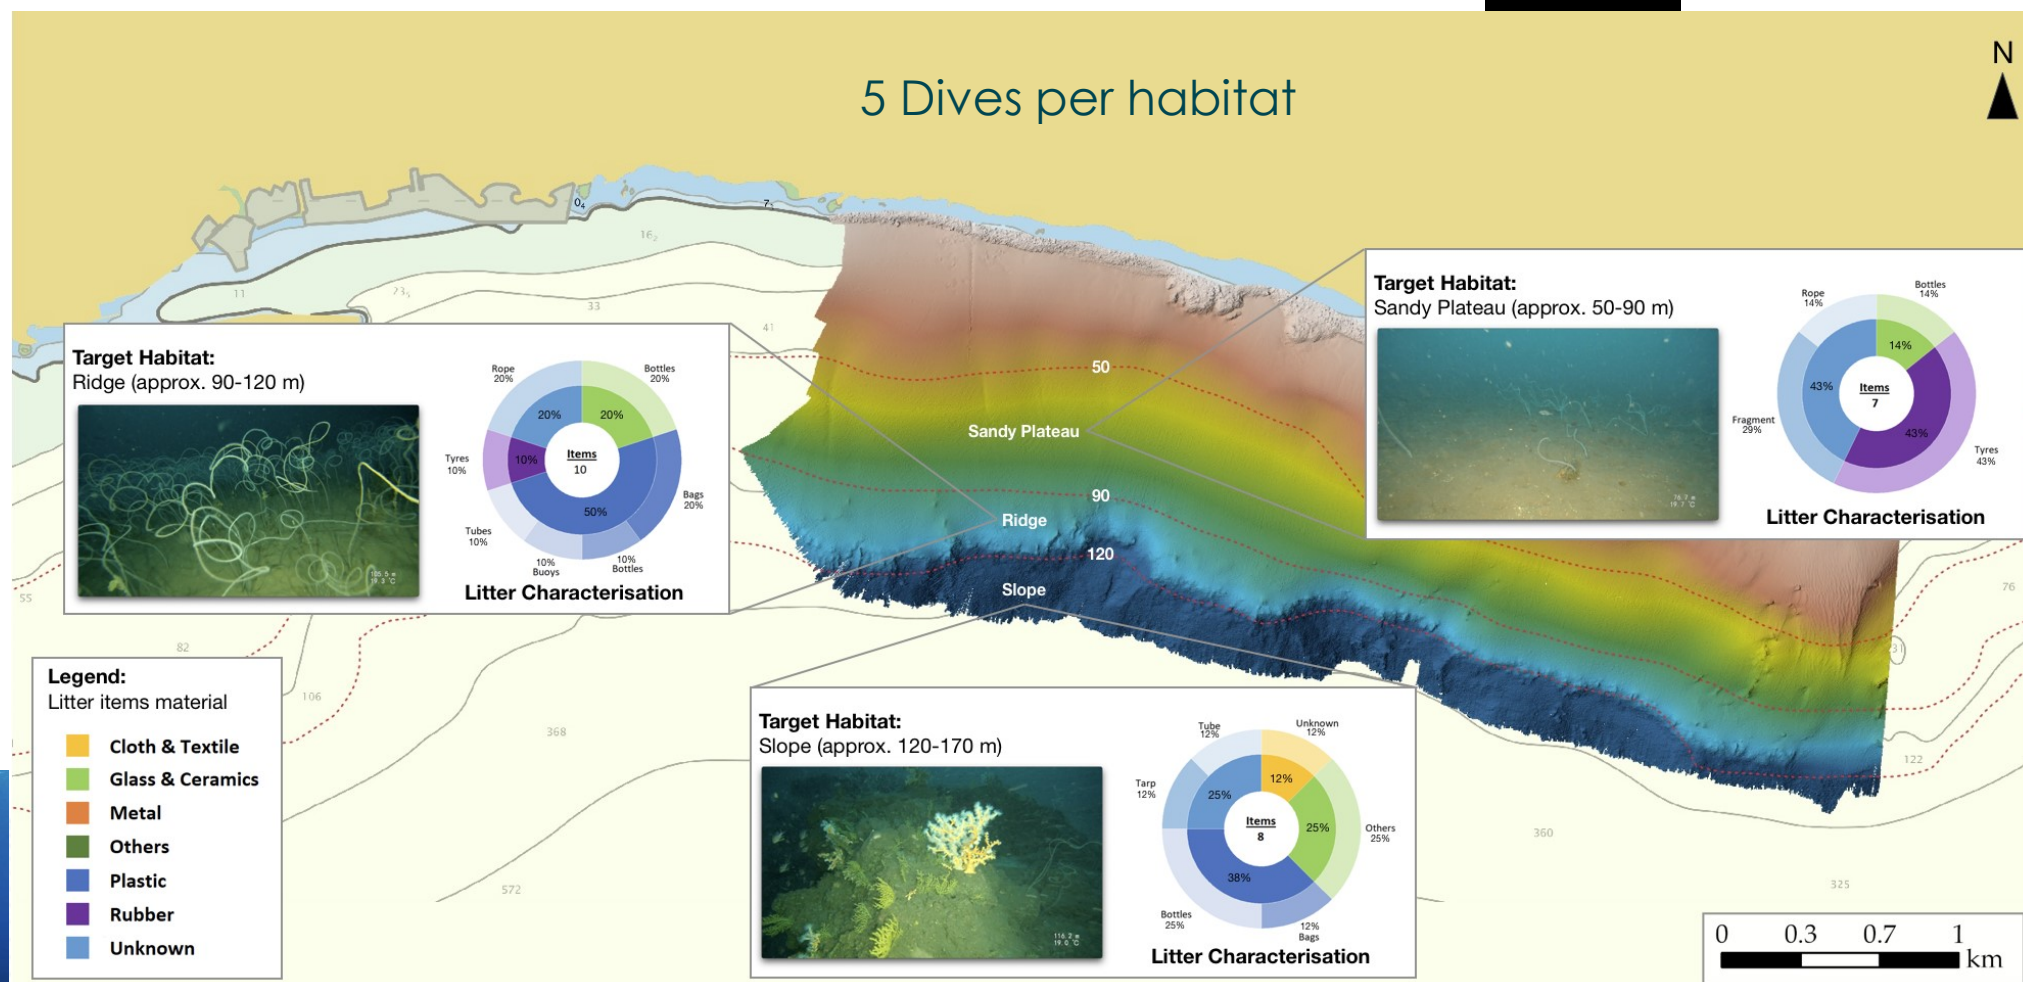

Assessing seafloor litter from ROV & UW video

Mapping with
no positioning:

- Directed for target area or habitat
- Lacks transect distance and density estimation

Assessing seafloor litter from ROV & UW video

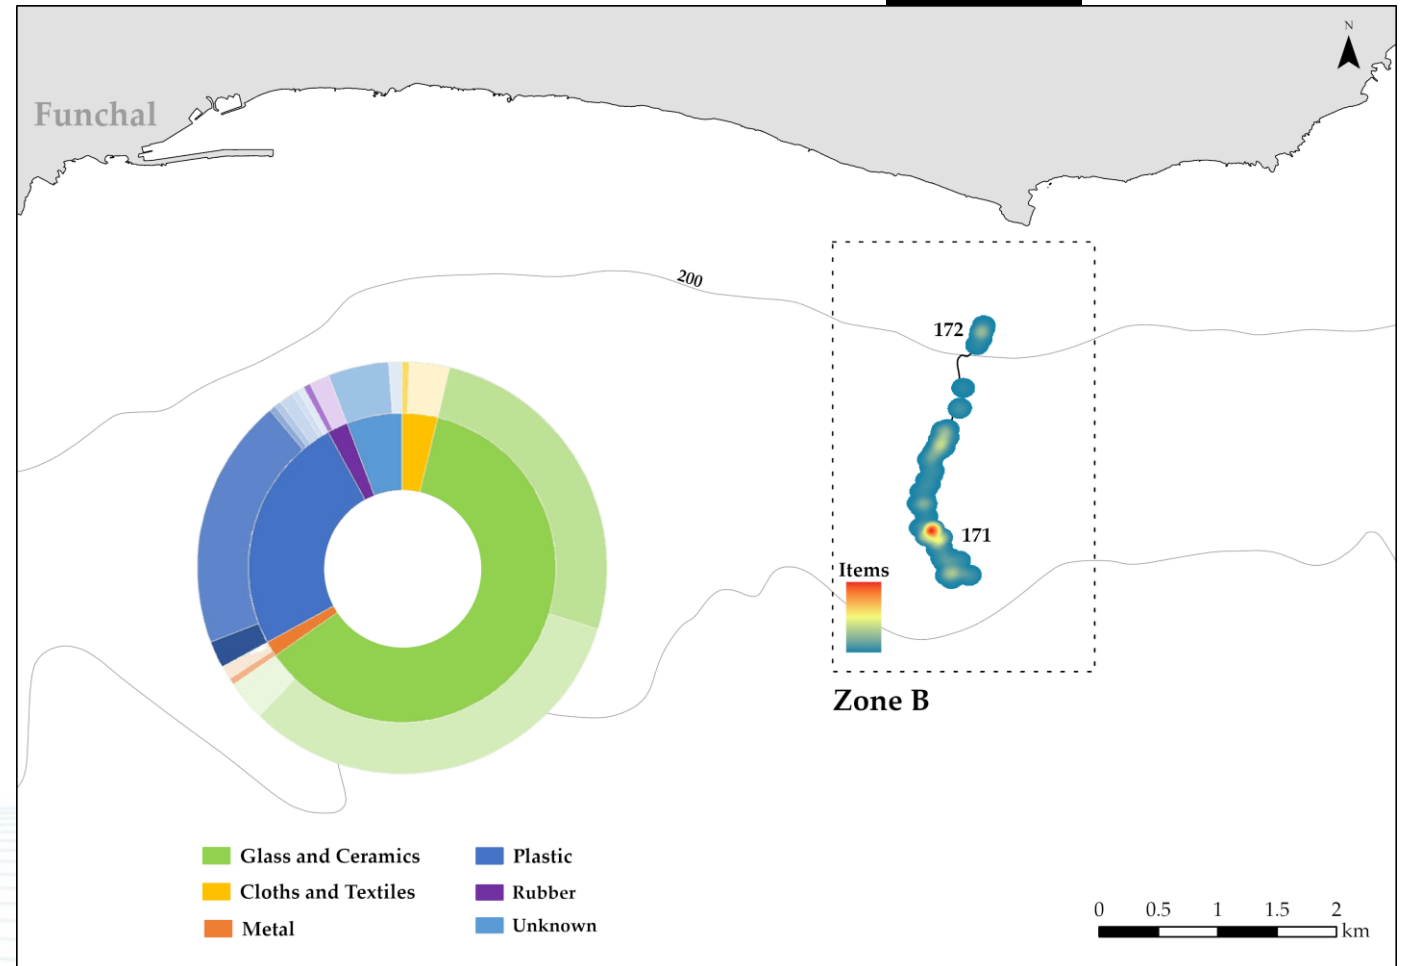

Technological solutions:

- Litter characterization
- Density map
- Interactions with biota

Challenges

- Positioning
- Navigation
- Image quality
- Autonomy

Assessing seafloor litter from ROV & UW video

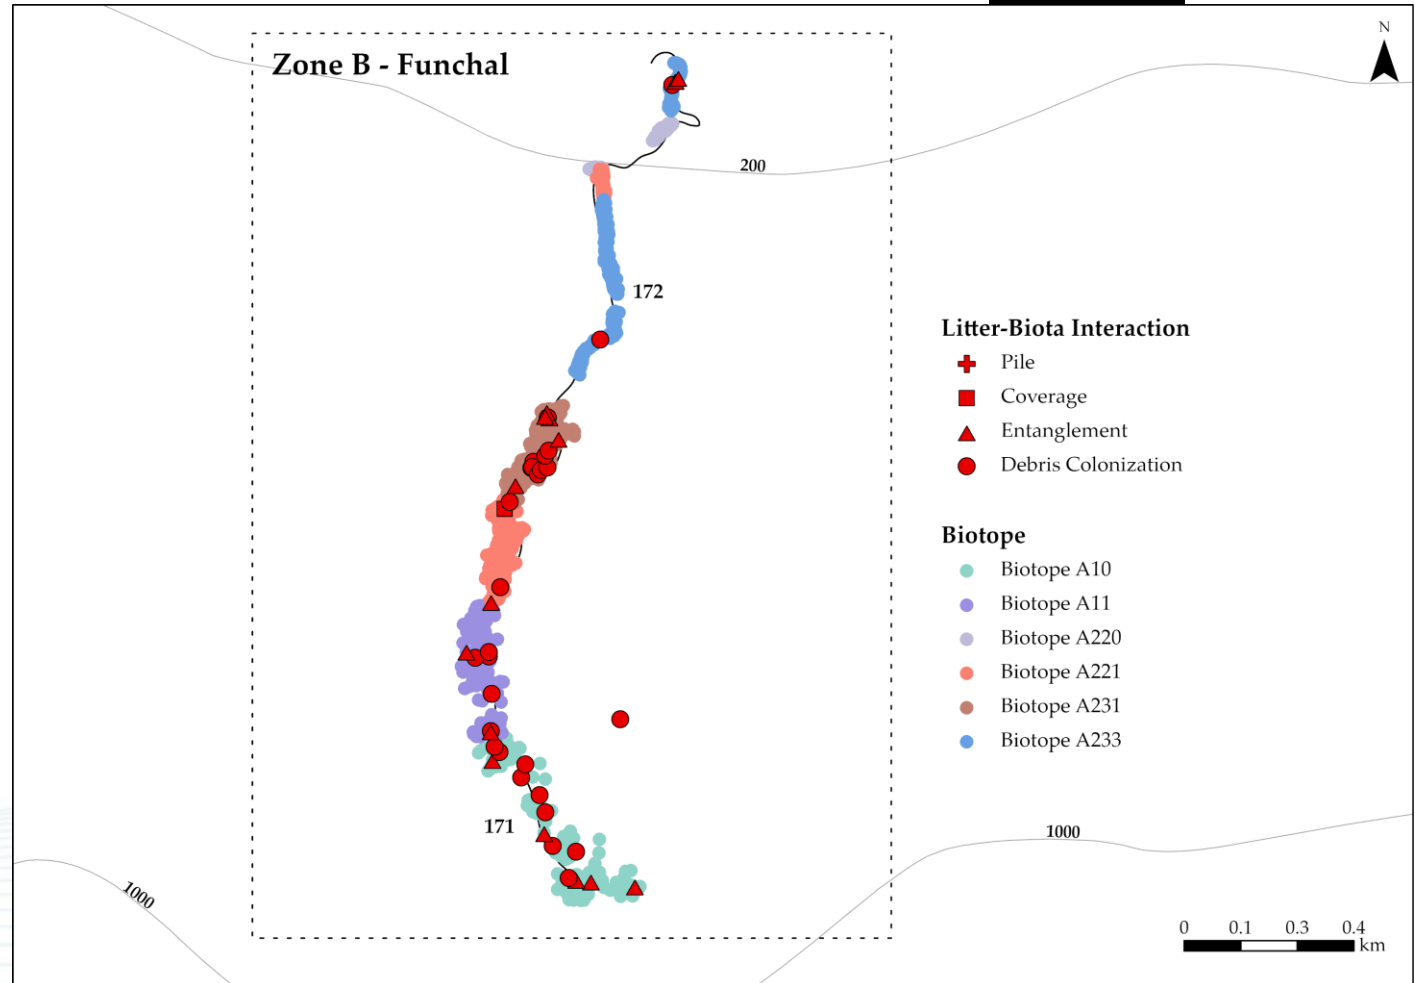

Technological solutions:

- Litter characterization
- Density map
- Interactions with biota

Challenges

- Positioning
- Navigation
- Image quality
- Autonomy

Discussion

- Comparison videos annotation between the 2 institutes
- Feedback from the use of BIIGLE
- Other opportunistic campaigns to explore?

Publication next year?

Thank you for listening
